

FEED INGREDIENT · DATA SHEET

Biscuit Meal

Energy ingredient recovered from the confectionery and bakery industry

Product description

A standardised feed ingredient made from former foodstuffs such as cake, chocolate, wafers, biscuits, crisps, bread and cocoa: de-packaged, crushed, sieved and heat-treated. It lowers feed cost and supports animal performance in poultry and ruminant rations.

With 3,500 tonnes of monthly capacity we deliver regularly and to a standard. The product is processed on our seven-step line in Eskişehir OSB and passes laboratory control.

Which animals is it for

- **Broilers:** Dense energy for fast weight gain
- **Layers:** Energy that lowers feed cost
- **Dairy and beef cattle:** Milk yield and daily gain
- **Fish:** Carbohydrate and energy source in pelleted feed

Contribution to the ration

- Lowers ration cost; price advantage over cereals.
- Easily digested by ruminants, improves feed efficiency.
- In balanced use, raises milk yield; in fattening, daily gain and carcass yield.
- High sugar content converts directly to energy and prevents yield losses.

Nutrient profile

Parameter	Value
Starch	40.00 – 45.00%
Sugar	15.00 – 18.00%
Crude fat	10.00 – 12.00%
Crude protein	8.80 – 9.90%
Crude fibre	1.20 – 2.80%
Crude ash	2.50 – 3.20%
Moisture	11.00 – 13.00%
Metabolisable energy	3,000 – 3,200 kcal/kg

Reference composition. A lot-specific analysis report is sent with every quote.

SOURCES

Bakery products such as biscuits, crackers and wafers; chocolate and confectionery; bread; crisps and snacks; coffee and nut residues.

FORM

Crushed, sieved, heat-treated dry mix. Delivered in bulk or in bags.

CERTIFICATES

ISO 9001:2015 · ISO 22000:2018 · HACCP · Halal · Provisional Operating Licence
