

COMPANY PROFILE · 2026

Turning former foodstuffs into feed ingredients

We de-package, crush, sieve and heat-treat former foodstuffs such as biscuits, chocolate, wafers and bread into standardised biscuit meal, and deliver it to compound feed mills and farms.

**3,500 t**

biscuit meal produced per month

In Eskişehir OSB since 2009

Eska Yem Geri Dönüşüm was founded in 2009 by Derin Kanatlı in the Eskişehir Organised Industrial Zone. Today we are one of Türkiye's largest suppliers and producers in our field.

We keep organic products from the food industry from becoming waste and recover them. Through de-packaging, crushing, sieving and heat treatment we turn them into animal feed ingredients. This reduces food waste and gives feed manufacturers in Türkiye and abroad an environmentally sound, cost-effective solution.

Timeline

2009

Founded

Founded by Derin Kanatlı in Eskişehir OSB; started with the recovery of former foodstuffs from Eti Gıda. The supplier network soon reached about forty companies.

2014

Compound feed trial

Entered the compound feed market under the slogan "Chocolate Feed"; sales exceeded a thousand tonnes a month.

2018

Food-to-feed focus

Compound feed activity was stopped and the vision narrowed to former foodstuff recovery. A second plant opened in Karaman and suppliers were won in south-east Anatolia; operations were later consolidated in Eskişehir.

Today

Scale and R&D

We process former foodstuffs from Türkiye's leading food companies to hygiene and quality standards and supply the feed industry. R&D work continues.

Vision, mission and values

VISION

To contribute to the protection of natural resources and leave a cleaner world to future generations by offering sustainable, innovative and environmentally sound solutions in recycling and recovery.

MISSION

To manage recycling and recovery processes efficiently, contribute to environmental sustainability, protect natural resources and add value to society.

Production steps

01

Goods receipt and inspection

Every incoming lot is inspected; anything outside our quality standards is returned. Products are routed to the right line by packaging type and content.

02

Holding and stock area

Lots that pass inspection wait in the holding area until processing.

03

Handling, de-packaging, crushing

Packaged products are automatically separated from their packaging in the crushing and de-packaging unit; the packaging goes to external recovery plants for disposal.

04

Heat treatment

Products with high moisture are heat-treated to bring moisture down to the target level.

05

Laboratory

Nutrient values are determined, quality and safety verified, regulatory compliance checked.

06

Finished product storage

Finished goods ready for dispatch are moved to the stock yard.

07

Dispatch

Delivered as a feed ingredient to compound feed mills and farms.

Biscuit Meal

A standardised feed ingredient made from former foodstuffs such as cake, chocolate, wafers, biscuits, crisps, bread and cocoa: de-packaged, crushed, sieved and heat-treated. It lowers feed cost and supports animal performance in poultry and ruminant rations.

Parameter	Value
Starch	40.00 – 45.00%
Sugar	15.00 – 18.00%
Crude fat	10.00 – 12.00%
Crude protein	8.80 – 9.90%
Crude fibre	1.20 – 2.80%
Crude ash	2.50 – 3.20%
Moisture	11.00 – 13.00%
Metabolisable energy	3,000 – 3,200 kcal/kg

WHICH ANIMALS IS IT FOR

- **Broilers:** Dense energy for fast weight gain
- **Layers:** Energy that lowers feed cost
- **Dairy and beef cattle:** Milk yield and daily gain
- **Fish:** Carbohydrate and energy source in pelleted feed

Our certificates

- **ISO 9001:2015** · Quality management system
- **ISO 22000:2018** · Food safety management system
- **HACCP** · Hazard analysis and critical control points
- **Halal** · Halal production certificate
- **Provisional Operating Licence** · Ministry of Environment, Urbanisation and Climate Change
